Desert Biome

Questions/Predictions

- Question: What plants do animals eat the most from the desert biome?

- Predictions: seeing a big animal, the barrel cactus will be eaten the most because it has fruit on it

Introduction

- On these next slides you'll see different plants and what kinds of animal eat those plants

Barrel Cactus

- Javelinas, bighorn sheep, mule deer, rodents (like packrats, squirrels and ground squirrels), jackrabbits, and various birds

Ocotillo Cactus

- Hummingbirds, bees, deer, bighorn sheep, rabbits, squirrels and various birds

Hedgehog Cactus

- Deers, rabbits, rodents, woodrats, squirrels, javelinas, ringtails and foxes

Cholla Cactus

- Some animals like sheep, rabbits, bears, rats kangaroos and birds they eat Cholla cactus.

Creosote

- Did you know that animal like woodrat, kangaroo, desert iguanas, hummingbird and chuckwalls

Pictures we captured

- We only saw birds that ate dry seeds because there wasn't even any fruit on the cactus
- If we did it again we would do it in the summer instead of the winter
